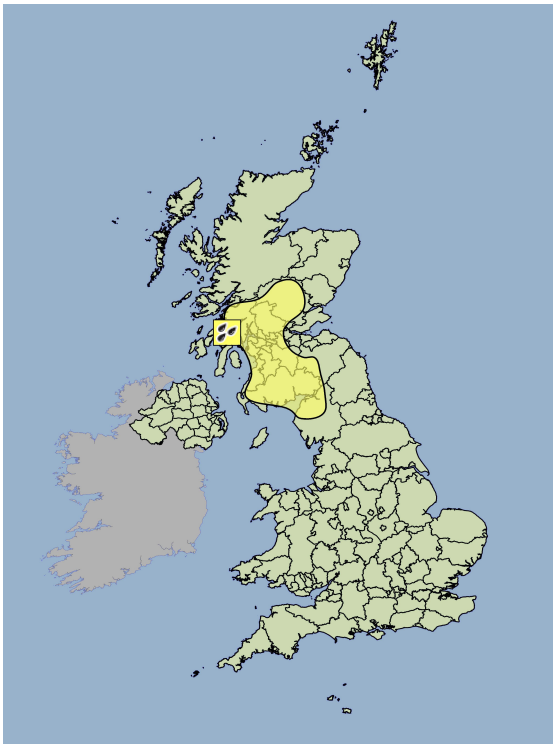
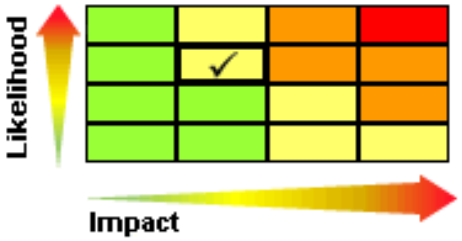
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold front will start to move eastwards across the area on Monday night, clearing away eastwards early on Tuesday. This front will bring with it a few hours' worth of rain, heavy at times, to the area covered by this warning leading to rainfall totals of 10-15 mm, perhaps locally 20-25 mm. Although these rainfall totals are much less than those which fell over the weekend, given the saturated ground and high river levels, some further localised flooding is possible.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **17:00 on Mon, 07th Dec 2015** until **05:00 on Tue, 08th Dec 2015**

A spell of persistent rain, heavy at times, is expect to affect parts of Scotland and Cumbria later today onwards into the night. Whilst this rain will neither be as heavy nor as prolonged as recent rain, please be aware that in view of the saturated nature of the ground and high river levels further localised flooding and disruption to transport is possible.

This is an update to the warning issued on Saturday to reduce the impacts to low-level.
